Implement Hill Climbing search algorithm to solve N-Queens problem

```
Iteration: 1
Current state: [3, 1, 2, 0]
Current cost: 2
Current board:
. . . Q
. Q . .
. . Q .
Q . . .

Best neighbor: [1, 3, 2, 0]
Best neighbor cost: 1
Best neighbor board:
. . . Q
Q . . .
. . Q .
. Q . .

Iteration: 2
Current state: [1, 3, 2, 0]
Current cost: 1
Current board:
. . . Q
Q . . .
. . Q .
. Q . .

Best neighbor: [1, 3, 0, 2]
Best neighbor cost: 0
Best neighbor board:
. . Q .
Q . . .
. . . Q
. Q . .

Iteration: 3
Current state: [1, 3, 0, 2]
Current cost: 0
Current board:
. . Q .
Q . . .
. . . Q
. Q . .

Goal state reached!
Final solution: [1, 3, 0, 2]
Final cost: 0
Final board:
. . Q .
Q . . .
. . . Q
. Q . .
```
